6	INTRODUCTION	
7	About this book	
8	PART I THEORY	
10	1. The physics of light	
11	What is light?	
12	The physical properties of light – what designers need to know	
13	Reflection	
14	Mirrors	
15	Transparency	
16	Filters and lenses	
18	Refraction	
19	Shadows	
20	What is colour?	
24	Quantifying light	
25	Luminance	
25	Candela	
25	Lumen	
25	Luminous flux	
25	Lux	
25	Illuminance	
25	Light meters	
26	2. Human factors	
26	Sensing light	
27	Adaption	
28	Experiencing changes in light levels	
29	Eyes and the sense of sight	
30	Stereo vision	
32	Motion detection	
33	Low light sensitivity	
34	Light and psychology	
34	How do we see?	
35	Preferences	
36	3. Natural light	
36	What do humans need?	
38	Sources of natural light	
40	Range of intensity	
41	Direction of natural light	
42	Colour and natural light	
45	Daylight control	
46	Case study: Architecture Gallery, Victoria & Albert Museum, London, UK	
48	4. Electric light	
49	Sources of electric light	
49	Incandescent light sources	
50	Discharge light sources	
55	Electroluminescent light sources	
57	Luminaires	
58	Dispersive and directional luminaires	
59	Concealed luminaires	
59	Manufacturer's data	
60	Generic luminaire types	
62	Visualizing patterns of light	
64	Visualizing spotlight data	
65	Isolux diagrams	
66	Lighting control systems	
68	Mains voltage dimming	
70	Electronic dimming	

72 PART II PROCESS AND PRACTICE

74 5. Lighting principles

- 74 Visual hierarchy
- 76 Understanding qualities of natural light
- 77 Understanding layers of light
- 79 Change and variation
- 80 Creating drama through lighting
- 82 Changing and controlling light
- 86 Surfaces and texture

88 6. Lighting for people

- 88 How much light is enough?
- 90 Lighting for comfort and safety
- 91 Task lighting
- 92 Lighting for orientation
- 94 Step by step: Lighting a corridor
- 96 Case study: Wayfinding: Terminal 2F, Charles de Gaulle Airport, Paris, France
- 98 Avoiding glare
- 100 Case study: Low light gallery, St Mungo's Museum of Religious Life and Art, Glasgow, UK

102 7. Lighting for architecture

- 102 Ambient lighting
- 106 Accent lighting
- 110 Case study: One Gyle Square, Edinburgh, UK
- 114 Case study: Sheikh Zayed bin Sultan Al-Nahyan Mosque (The Grand Mosque), Abu Dhabi, UAE
- 120 Lighting vertical surfaces
- 121 Integrating light with architecture
- 122 Case study: Morimoto Restaurant, Philadelphia, USA

126 8. The design process

- 128 Researching the project
- 128 Analysis of needs
- 129 Outline proposal stage
- 129 Detail design stage
- 129 Construction stage
- 129 Final focus and programming
- 129 Client handover
- 130 Case study: St Machar's Cathedral, Aberdeen, UK

140 9. Recording and visualizing lighting

- 141 Drawing and sketching
- 142 Abstract representation
- 144 Diagrammatic representation
- 146 Photography
- 148 Computer renders as a design tool
- 150 Physical models

154 10. Project communication and completion

- 155 What is enough information?
- 156 Sections and elevation drawings
- 158 Case study: Musée de l'Orangerie, Paris, France
- 162 Lighting renders
- 164 Step by step: Using computer models
- 166 Recording circuiting and control intent
- 168 Use of sketch details
- 170 Lighting mock-ups and tests
- 172 Specification documents
- 172 Generic specification
- 172 Detailed specification
- 174 Realizing the project
- 175 Final focusing and programming

178 Conclusion: the future

184 Glossary

186 Further reading

187 Index

191 Picture credits

192 Acknowledgements
